Install protectors in distribution boxes

Overview

In this video, I'll walk you through the process of wiring and installing a Surge Protection Device (SPD) in a Main Distribution Board. Protect your electrical system from power surges and lightning strikes by following this simple and clear wiring diagram for an effective SPD setup. Properly installing an SPD in the electrical box can limit surges to a safe level before they reach terminal equipment and discharge excess energy to the ground through a dedicated grounding path, effectively reducing the risks of equipment damage, short circuits, fires, and unplanned downtime. What happens if the distribution box is not protected?

Surge protectors are the first line of defense. They clamp overvoltage and send surge current to the ground. These rules help keep your electrical system safe.
