300 Type Electrical Cable Tray Specifications

Overview

GUIDE CABLE TRAYS TECHNICAL Specifies requirements for metal cable trays and associated fittings designed for use in accordance with the rules of Canadian.

Key Takeaways

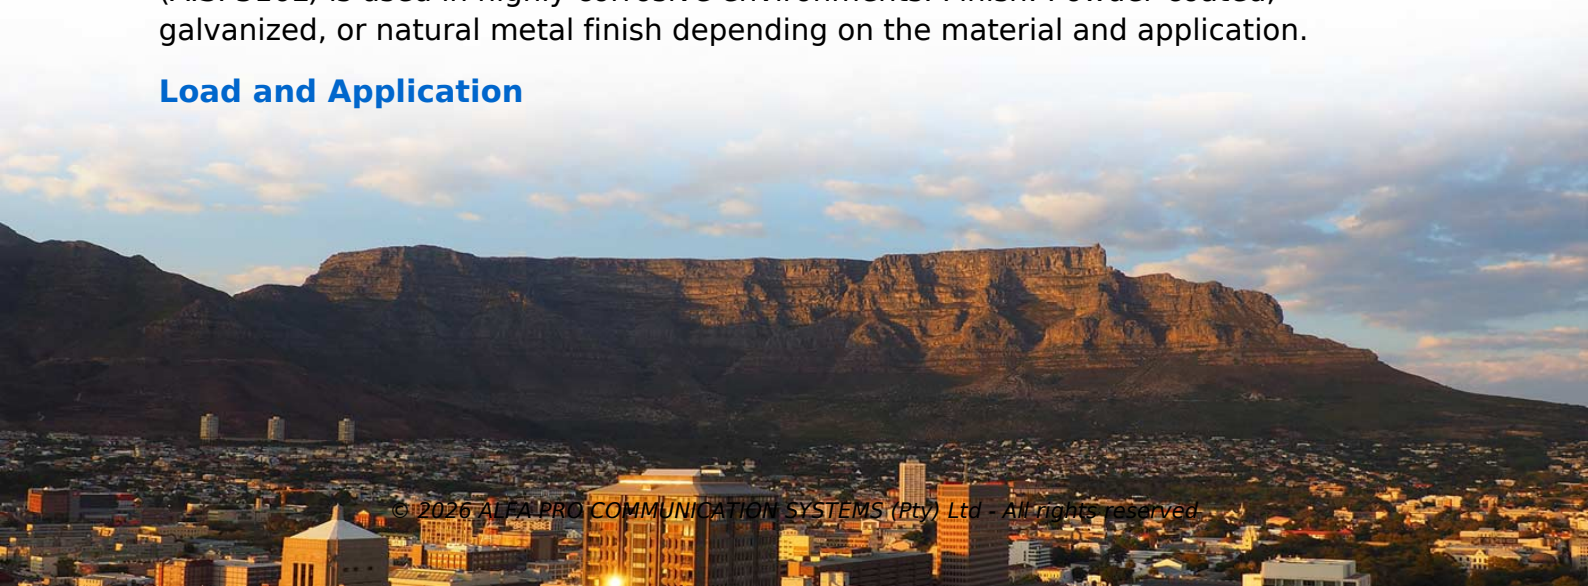

The 300 Type Electrical Cable Tray is a medium-duty, 300mm wide tray, typically 25mm deep, designed for standard electrical cable management applications.

General Specifications

Width: 300mmDepth: 25mmLength: Standard 3-meter sections, often ordered in multiples of 3 meters. Design Type: Return flange design, which provides additional edge protection for cables and helps prevent cable slippage. Material Options: Commonly manufactured from steel, aluminum, or stainless steel depending on environmental requirements.

Steel trays may be pre-galvanized or hot-dip galvanized for corrosion resistance, while aluminum offers lightweight and excellent corrosion resistance. Stainless steel (AISI 316L) is used in highly corrosive environments. Finish: Powder-coated, galvanized, or natural metal finish depending on the material and application.

Load and Application

Duty Rating: Medium-duty, suitable for general electrical installations in commercial and industrial settings. Cable Support: Designed to support multiple electrical cables, maintaining proper spacing and bend radius to prevent damage. Ventilation: Some 300 Type trays may have solid or ventilated bottoms; ventilated trays allow heat dissipation and reduce cable overheating.

Compliance and Standards

Certifications: CE marking for European compliance, UL and NEMA standards for North American installations. Installation Guidelines: Must follow manufacturer recommendations for load, spacing, and environmental conditions. Proper support intervals and secure fastening are essential to maintain structural integrity and safety.

Additional Notes

Environmental Considerations: Material selection should consider exposure to moisture, chemicals, or outdoor conditions. Aluminum and stainless steel are preferred for corrosive environments. Accessories: Compatible with covers, bends, tees, and junctions to create a complete cable management system.

The 300 Type Electrical Cable Tray is widely used in commercial, industrial, and utility installations where medium-duty cable support is required, offering a balance of strength, corrosion resistance, and ease of installation.
