Installation price of elbow cable tray

Overview

Cable tray are used in wiring of buildings to support electrical cables and wires that are used to distribute power, controls and communication.

Key Takeaways

The cost of a single cable tray elbow typically ranges from $1. 30 for the material, with installation costs varying widely depending on project complexity, labor, and environment.

Material Cost

A standard cable tray elbow, available in galvanized or stainless steel, can cost around $1. 30 per piece when purchased in bulk for industrial use. Prices may increase for custom sizes, specialized coatings, or small-quantity purchases.

Installation Cost

The installation cost of a cable tray elbow is influenced by several factors: Tray type and size: Larger or heavier trays require more labor and stronger supports. Installation height and accessibility: Elevated or hard-to-reach locations increase labor costs. Project environment: Outdoor, corrosive, or high-humidity environments may require additional protective coatings or covers, raising costs.

Labor and coordination: Installing an elbow involves cutting, bending, and securing the tray, which can add 20–30% of the total cable tray system cost due to brackets, supports, and alignment. For a typical indoor industrial project, the installation of a single elbow may range from $10 to $50, depending on complexity, labor rates, and material handling requirements. In high-demand environments, such as elevated or outdoor installations, costs can be higher.

Cost Optimization TipsPre-fabricated elbows reduce on-site labor compared to cutting and bending trays manually. Planning tray routes to minimize the number of bends can significantly reduce total project costs. Selecting appropriate materials (steel, aluminum, or stainless steel) based on environmental conditions can prevent future maintenance costs.

In summary, while the material cost of a single elbow is low (~$1. 30), the installation cost is highly variable and can significantly exceed the material price depending on project conditions, labor, and complexity.
