

Are 10 Gigabit optical modules dual-wavelength

Overview

Use Dense Wavelength-Division Multiplexing (DWDM) SFP+ modules to integrate WDM transport directly into your Cisco 10 Gigabit Ethernet switches and routers.

Key Takeaways

Most standard 10G SFP+ optical modules operate on a single wavelength, but certain BiDi and DWDM modules use dual or multiple wavelengths. Standard 10G Optical Modules Typical 10G SFP+ modules such as SR, LR, ER, and ZR operate on a single fixed wavelength: SR: 850 nm for short-reach multimode fiber (up to 400 m) LR: 1310 nm for single-mode fiber (up to 20 km) ER/ZR: 1550 nm for long-reach single-mode fiber (up to 80 km) These modules are single-wavelength transceivers, meaning they transmit and receive on the same wavelength pair over duplex fiber, not dual wavelengths on a single fiber strand.

Dual-

Wavelength Modules

Some 10G modules are designed to use dual wavelengths on a single fiber: BiDi (Bidirectional) SFP+ modules: Transmit and receive on two different wavelengths over a single fiber strand, effectively halving fiber usage while maintaining full-duplex 10G communication.

DWD

M (Dense Wavelength Division Multiplexing) modules: Each module operates on a specific ITU-defined wavelength, and multiple modules can coexist on the same fiber using different wavelengths.

Tunable DWD

M modules can select from multiple wavelengths, but each module itself typically uses one wavelength at a time.

CWD

M and Tunable Modules CWD modules: Use coarse wavelength spacing, generally single-wavelength per module, but multiple wavelengths can be multiplexed on the same fiber.

Tunable DWD

M modules: Can be configured to operate on any of the supported wavelengths, but each transceiver still transmits on a single wavelength at a time.

Summary

Standard 10G SFP+ modules (SR, LR, ER, ZR): Single wavelength
BiDi modules: Dual wavelengths on a single fiber strand
DWDM/CWDM modules: Single wavelength per module, but multiple wavelengths can coexist on the same fiber using WDM techniques
Tunable DWDM modules: Single wavelength per module, tunable across a range of wavelengths
In conclusion, 10G optical modules are not inherently dual-wavelength; only specific BiDi or WDM modules use dual or multiple wavelengths to optimize fiber usage and network capacity.

Cisco Transceiver Modules

Use Dense Wavelength-Division Multiplexing (DWDM) SFP+ modules to integrate WDM transport directly into your Cisco 10 Gigabit Ethernet switches and routers.

How to Choose a 10G SFP+ Module: Speed, Wavelength, and

Wavelength, measured in nanometers (nm), is the most important differentiator between 10G SFP+ module types. It determines how light travels down the fiber and directly dictates which

SFP+ BiDi 10G Guide: Single Fiber 10G Optical Transceivers

10G SFP+ BiDi technology enables full-duplex 10-gigabit communication over a single fiber by transmitting and receiving data on two different optical wavelengths.

Inventory Of 10G Optical Modules

The 10G SFP+ DWDM optical module is a dense wavelength division multiplexing optical module, with a maximum transmission distance of up to 80km, suitable for long-distance data

How to Choose a 10G SFP+ Optical Module

These 10G BiDi modules offer various wavelength options and can support transmission distances comparable to traditional SFP+ optical modules, typically covering up to 10km or more,

Arista Optics Modules and Cables

Arista's Optical Modules and Cable portfolio offer a wide variety of high-density and low-power 800G (dual 400G), 400G, 200G, 100G, 50G, 40G, 25G, 10G, 1G, and 100M Ethernet connectivity options

Comprehensive Guide to FS 10G BiDi SFP Modules

10G BiDi SFP+ modules utilize a unique optical mechanism that enables full-duplex data transmission over a single strand of single-mode fiber (SMF). This is achieved using two different

Multimode SFP+: 10GBASE-SR Specs, Fiber Types and Use Cases

These modules operate at an 850 nm optical wavelength, which is optimized for multimode fiber and enables efficient transmission using VCSEL (Vertical-Cavity Surface-Emitting

10G SFP+ Optical Transceivers | Transceiver Module

FS 10GbE SFP+ module solutions provide a wide variety of 10 Gigabit Ethernet connectivity options for data centers, enterprise wiring closets, Internet Service Providers (ISPs) applications.

Stock SFP28 25G 850NM 100M LC 5G 3G Optical Module

About this supplier FiberRun (Wuhan Fangran Technology Co., Ltd.) is a professional optical module and fiber communication component manufacturer established in 2020, headquartered in Wuhan

Optic Modules Datasheet

Features and Benefits The following table lists the different pluggable optic modules and supported platforms, along with the technical specifications for each.

Guide to 10G BiDi SFP+ Optical Transceivers

Our 10G BiDi SFP+ Optical Transceivers Modules deliver full 10 Gb/s over a single strand of single-mode fiber, halving fiber count and simplifying cable

Things You Need to Know About Optical Modules and Wavelengths

Introduction What are optical modules used to build a campus network? What are differences between various optical modules? How should we select optical modules? You will get

Introduction of 10G SFP+ Optical Modules

10G SFP+ Optical Module is a type of SFP+ transceiver that supports 10 Gigabit per second (10Gbps) data rates and is an enhanced version of the standard SFP (Small Form-factor

Inventory Of 10G Optical Modules

SFP+ optical modules are widely used in 10G Ethernet due to their advantages of compact size, low cost and high density, and they are currently the most common 10G optical

Cisco 10GBASE DWDM X2 Modules Data Sheet

Product overview The Cisco ® Dense Wavelength-Division Multiplexing (DWDM) X2 pluggable module (Figure 1) allows enterprise companies and service providers to offer scalable and

Cisco 10GBASE Dense Wavelength-Division Multiplexing XFP Modules

Product Overview The Cisco® Dense Wavelength-Division Multiplexing (DWDM) XFP pluggable module (Figure 1) allows enterprise companies and service providers to provide scalable and easy-to-deploy

10G BiDi SFP+ Modules: A Guide to Single-Fiber 10G Deployment

10G BiDi SFP+ modules are a game changer when it comes to network design and can support 10 Gigabit Ethernet over a single fiber strand. Traditional duplex modules will need two fibers, one for
