

Bosnian Electro-optical Hybrid Cable Single Core

Overview

CommScope bundles hybrid cabling to your custom specifications, using our high-performance fiber-optic, unshielded twisted pair and coaxial cables.

Key Takeaways

A single-core electro-optical hybrid cable combines optical fiber and metallic conductors in one cable, enabling simultaneous data transmission and power delivery in a compact, durable design. OverviewElectro-optical hybrid cables integrate optical fibers for high-speed data transmission with metallic conductors for power delivery, allowing a single cable to serve both communication and electrical needs. Single-core variants contain one metallic conductor alongside the fiber, simplifying installation and reducing conduit space compared to separate power and fiber runs.

These cables are particularly useful for telecommunication networks, FTTA (Fiber to the Antenna), surveillance systems, and industrial automation.

Construction and Specifications

Fiber Type: Single-mode (OS1/OS2) for long-distance, low-loss transmission, or multimode (OM3/OM4/OM5) for shorter, high-bandwidth applications. Conductor: Single metallic core, typically copper, sized according to power requirements. Cross-sections can range from 6 mm² to 25 mm² in multi-core designs, with single-core cables optimized for specific power loads.

Jacket and Armoring: Hybrid cables often feature UV-resistant, rodent-resistant, and crush-resistant jackets, suitable for indoor, outdoor, and industrial environments.

Temperature and Environmental Ratings: Designed to operate in extreme temperatures, from freezing to high heat, and resistant to moisture and sunlight.

Advantages

Consolidation: Reduces the number of separate cables, conduits, and terminations, lowering installation and maintenance costs.

Power over Fiber: Supports DC power delivery to remote devices such as cameras, Wi-Fi access points, or small telecom equipment.

Durability: Armored and UV-resistant designs ensure long-term reliability in harsh environments.

Standards and Compliance Electro-optical hybrid cables follow international standards such as ITU-T L. 109, which provides guidance on the construction, testing, and environmental requirements for optical/metallic hybrid cables. Compliance ensures interoperability, safety, and performance consistency across installations.

Applications

Telecommunication networks: Fiber backhaul with integrated power for remote nodes.

FTT

A (Fiber to the Antenna): Powering and connecting cellular antennas.

Surveillance and security systems: Cameras powered and connected via a single cable.

Industrial automation: Remote sensors and devices requiring both data and power.

In summary, a single-core electro-optical hybrid cable is a versatile solution for combining high-speed optical communication with power delivery in a single, robust cable, suitable for both indoor and outdoor applications, and compliant with international standards for hybrid cable construction.

Hybrid Cables

CommScope bundles hybrid cabling to your custom specifications, using our high-performance fiber-optic, unshielded twisted pair and coaxial cables.

Hybrid cables

Hybrid cables for AC voltage feeding with 3 power conductors. Customized structures: A single hybrid cable can consist of mixed copper wire sizes for

Optical Hybrid Cables: A Comprehensive Guide

Hybrid cables permit this directly, with a single cable being able to support both the fiber backhaul and the power to power cameras, Wi-Fi APs, or

Hybrid Cables | multifunctional combination of cable

Highly flexible and biocompatible cables combine, for example, optical fibres, coaxial elements, single wires and strain relief. For a supple surface without stick-slip

What Is Hybrid Cable?

Drawing on a special fiber-copper incorporation structure and a custom protective layer, the hybrid cable ensures that optical signals and electrical signals do not interfere with each other during

Hybrid cable

Fiber Optic and Coaxial Hybrid Cable: This hybrid cable integrates fiber optic cores with coaxial conductors, providing a solution for transmitting high

Hybrid cables

This allows you to be more flexible in laying the cable and saves investment costs compared to buying single cables. We can also design our hybrid system cables
