# Latest version of cabinet wiring technical standards

## Overview

Find all your Woodwork Institute publications here, from NAAWS to Guide Specifications and even our Cabinet Design Series.

## Key Takeaways

The latest UK wiring standard is BS 7671:2018+A4:2026, while international control cabinet standards are IEC 60204-1 and IEC 61439.UK Wiring Regulations (BS 7671:2018+A4:2026)

The IET Wiring Regulations, BS 7671, is the UK's national standard for electrical installations, covering design, installation, inspection, and verification of circuits up to 1000 V AC or 1500 V DC . The latest amendment, A4:2026, incorporates updates for modern technologies such as energy storage, smart systems, Power over Ethernet (PoE), EV charging, heat pumps, and advanced medical installations . It provides guidance for domestic, commercial, and specialized environments, ensuring compliance with Building Regulations and the Electricity at Work Regulations . Practitioners should reference BS 7671:2018+A4:2026 on all certificates and specifications to remain compliant .

International Control Cabinet Standards

For control cabinets and low-voltage switchgear assemblies, the key international standards are:

© 2026 ALFA PRO COMMUNICATION SYSTEMS (Pty) Ltd - All rights reserved

• IEC 60204-1: Safety of machinery – Electrical equipment of machines – Part 1: General requirements. This standard defines electrical safety requirements for machinery and control panels, including risk assessment, protection against electric shock, and operational safety .

• IEC 61439: Low-voltage switchgear and controlgear assemblies. It specifies design, construction, and testing requirements for low-voltage switchgear assemblies, including temperature rise, short-circuit withstand, and electromagnetic compatibility . These IEC standards are regularly updated to reflect technological advances and are transposed into national regulations in many countries, including Germany (DIN EN 60204-1) and other EU member states . Compliance requires risk analysis, thermal verification, short-circuit verification, and EMC assessment as part of the conformity assessment procedure .
Practical Implementation
• Design and Installation: Follow BS 7671:2018+A4:2026 for UK installations, and IEC 60204-1/61439 for industrial control cabinets.

• Inspection and Testing: Use guidance notes and on-site guides aligned with the latest amendments to ensure safety and regulatory compliance .

• Documentation: Maintain risk assessments, technical documentation, and certification forms as required by both UK and international standards .

• Emerging Technologies: Ensure standards are applied to EV charging, solar PV, energy storage, and smart systems, reflecting the latest amendment updates . By adhering to BS 7671:2018+A4:2026 and IEC 60204-1/61439, electrical designers and installers can ensure safe, compliant, and future-ready cabinet wiring installations.
