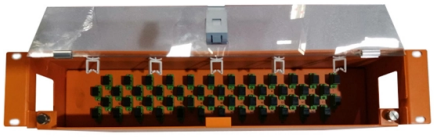
Malawi Low-Voltage Distribution Box Standards



Overview

Regular maintenance and timely upgrades are crucial to keeping our distribution network robust and reliable.

Key Takeaways

Low-voltage distribution boxes in Malawi are designed for 230/400V AC at 50 Hz, conforming to SANS 60947 standards, with modular busbars rated for specified fault currents and robust construction for industrial and residential use.

Voltage and Frequency Ratings

Low-voltage distribution boxes in Malawi are typically rated for 230/400 Volt AC at 50 Hz, suitable for standard low-voltage distribution networks . The equipment must operate reliably under these supply conditions and accommodate both single-phase and three-phase connections.

Standards Compliance

Distribution boxes must comply with SANS 1973/60439 and SANS 60947 Parts 1–7, ensuring safety, performance, and interoperability . Additional standards such as SANS 10064 and SANS 1195 govern preparation, painting, and busbar construction. Compliance with these standards ensures the boxes meet national and international quality and safety requirements .

Construction and Materials

• Panel Construction: Panels are made of steel, properly pickled, passivated, and coated with epoxy polyester powder (60 microns final thickness) for corrosion resistance .

• Front Panels: Hinged or removable covers must be lockable, with neoprene or rubber gaskets to prevent dust and moisture ingress . Panels over 450mm in height require securing at both top and bottom.

• Busbars: Modular busbar systems are standard, designed to carry 1.6 A/mm² and withstand fault currents for 1 second at the specified fault level . Certificates of testing and ratings must be available.

• Future Expansion: Provision for future extensions is required, with pre-drilled holes and space for additional modules .

Types and Models

Common low-voltage distribution box models include:

• GGD Series: Fixed switchgear for substations and power plants, rated at 380V, AC 50Hz, with high breaking capacity .

• GDH and PGL Series: Fixed low-voltage switchgear for stable power supply in industrial and commercial settings .

• GCK Series: Withdrawable switchgear, typically 660V, AC 60Hz, suitable for motor control and lighting systems .

• GCS Series: 400V, AC 50Hz, used in power plants, high-rise buildings, and heavy consumption areas .

• MNS Series: Compact, stable performance for small power plants, industrial, mining, and hotel applications .

Installation Requirements

• Schematic Diagrams: Must follow approved line diagrams for cable entry and exit .

• Rigidity and Bracing: Panels must be braced to withstand mechanical stress and environmental conditions, including coastal humidity .

• Instrument Mounting: Instruments are flush-mounted with protective frames to prevent damage .

• Surface Preparation: All metal parts must be cleaned of rust, mill scale, and grease before painting .

Summary

© 2026 ALFA PRO COMMUNICATION SYSTEMS (Pty) Ltd - All rights reserved

Malawi low-voltage distribution boxes are robust, modular, and compliant with SANS standards, designed for 230/400V AC at 50 Hz. They include fixed and withdrawable switchgear models suitable for industrial, commercial, and residential applications, with attention to safety, fault tolerance, and future expansion . Proper installation, testing, and certification are mandatory to ensure compliance and operational reliability.
