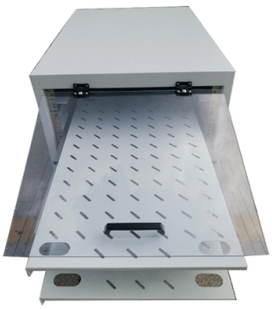
Material of 4-port 8-core terminal box



Overview

4 Port Surface Mount Fiber Wall Plate Box for SC/APC AdapterIt is made of durable, high-quality ABS plastic, offering excellent protection for optical fibe.

Key Takeaways

4-port 8-core fiber optic terminal boxes are typically made of metal (cold-rolled steel) or durable plastic (ABS/ABS+PC), depending on the model and manufacturer.Metal Terminal Boxes

Many 4-port 8-core terminal boxes are constructed from cold-rolled steel with electrostatic spraying, providing durability, mechanical protection, and a secure housing for fiber splicing and termination. These metal enclosures are compact, lightweight, and often feature a hinged door with a locking mechanism for easy access and security. They are suitable for indoor FTTH, FTTB, and business building installations, offering protection against physical damage and supporting multiple fiber connectors such as SC, LC, FC, or ST (FTB-104A, NavePoint 00407614, TopFiberBox) .

Plastic Terminal Boxes

Some manufacturers produce 4-port 8-core terminal boxes using ABS or ABS+PC plastic, which is lightweight, corrosion-resistant, and provides adequate protection against dust and moisture. These plastic enclosures are often rated for IP65 to IP68 waterproofing, making them suitable for both indoor and certain outdoor applications. They are widely used in telecom rooms, corridors, and residential FTTH setups, offering flexibility in installation and cost efficiency .

Summary
• Metal (cold-rolled steel): High durability, secure, ideal for indoor wall-mounted installations, supports multiple connector types.

• Plastic (ABS/ABS+PC): Lightweight, corrosion-resistant, can be waterproof, suitable for indoor and some outdoor environments. Choosing between metal and plastic depends on the installation environment, required durability, and protection level. For indoor residential or office FTTH setups, either material is commonly used, while metal is preferred for higher mechanical protection.
