What types of network cables are equivalent to fiber optic patch cords

Overview

For structured cabling systems and network deployments, fiber optic patch cords and Ethernet cables are two essential types of cables. Both belong to the field of weak-current systems, and yet they differ significantly in transmission medium, application scenarios, and structural. When you build or upgrade a fiber network, the same four words pop up everywhere— fiber optic (bare fiber), pigtail, patch cord, optical cable. Mixing them up drives costs higher, increases loss, and slows your rollout. Plus, the. Patch cords, also known as patch cables, are relatively short cables designed to connect different network devices or electronic systems. Unlike backbone trunk cables—which are typically multi-fiber. At present, everyone knows that network transmission is nothing more than three methods: coaxial cable, network cable, and optical fiber. Network cables and optical fibers have become the two most important carriers in network.
