Offshore Price for Long-Distance Optical Cable G 652D

Overview

G.652D Optical Fiber This low water peak non-dispersion-shifted single-mode optical fiber meets or exceeds the optical fiber standards of Fiber Optic Cable.

Key Takeaways

The offshore price for G.652D long-distance optical fiber currently ranges from approximately $0.01–$0.09 per meter, depending on volume, cable type, and supplier, with prices rising due to high global demand and supply constraints.Current Price Range

G.652D fiber optic cable prices vary widely based on volume, cable design, and supplier location. Standard single-mode fiber costs between $0.09 and $1.49 per foot (roughly $0.30–$4.87 per meter), with bulk orders over 100,000 meters potentially reducing costs by more than 50% . High-volume factory wholesale prices for long-distance deployments can reach as low as $0.01–$0.02 per meter for standard copper-conductor or non-armored cables . Specialized armored or high-performance cables for submarine or harsh environments command higher premiums.

Factors Influencing Price
• Global Demand: The surge in 5G deployment, FTTH expansion, AI data centers, and hyperscale interconnects has increased G.652D demand faster than supply .

• Raw Material Costs: Silica preforms and copper components directly affect cable pricing .

• Manufacturing Capacity: Leading manufacturers like GL FIBER operate at near-maximum capacity, producing hundreds of kilometers daily, but demand continues to outstrip supply .

• Logistics and Tariffs: Offshore procurement may include shipping, import duties, and handling costs, which can significantly impact the final delivered price .

• Cable Specifications: Low-water peak, macrobending-resistant, and DWDM-compatible fibers for long-distance or submarine applications are priced higher due to enhanced performance and reliability .
Market Trends
• Price Volatility: Quotation validity is often short (1–3 days) due to tight allocations and high demand .

• Regional Supply: Asia-Pacific dominates production, with China supplying a significant portion of global fiber-km .

• Long-Distance Applications: Submarine and long-haul terrestrial cables increasingly use G.652D for its low attenuation, bending resistance, and compatibility with 100G/400G coherent systems .
Procurement Recommendations
• Bulk Orders: Consolidating large orders can reduce per-meter costs significantly.

• Supplier Selection: Direct manufacturers often offer better pricing than distributors, but verified quality and delivery reliability are critical.

• Phased Procurement: Staggered orders and framework agreements help mitigate price volatility and allocation risks . In summary, offshore G.652D long-distance optical cable prices are currently elevated due to high demand and constrained supply, with standard bulk pricing ranging from $0.01 to $0.09 per meter, and specialized cables costing more depending on technical specifications and deployment requirements .
