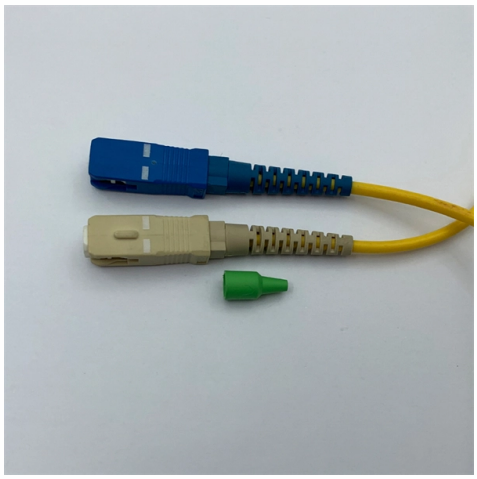
Price of wall-mounted wiring for distribution boxes



Overview

Junction Box Cost Guide: Prices & Installation 2026A junction box can cost anywhere from around $10 for a simple indoor plastic box to several hundred doll.

Key Takeaways

Running electrical wiring through walls to distribution boxes typically costs between $5 and $11 per linear foot, with total project costs influenced by labor, materials, and complexity.

Wiring Costs

The cost of installing electrical wiring through walls depends on the type of wire, wall accessibility, and labor rates. In urban areas like Manhattan, NY, installation costs range from $5. 90 to $10.

94 per linear foot, including materials and labor for copper or aluminum wiring, junction boxes, and outlets. For broader U. S. residential projects, wiring costs are often estimated at $4.

50–$6. 50 per square foot for mid-size homes with standard finishes, which accounts for conduit, labor, and permit fees. Factors affecting wiring costs include: Wall type and accessibility: Finished walls or tight spaces increase labor time.

Conduit requirements: Running wires through conduit adds material and labor costs. Number of circuits: More circuits require additional wiring and breakers. Service upgrades: Upgrading from 100A to 200A service increases costs due to panel replacement and additional receptacles.

Distribution Box Costs

Distribution boxes (panels) serve as central hubs for power distribution. Residential indoor panels (100–125A) typically cost $1,200–$2,500 including labor, while 200A outdoor upgrades can reach $3,000–$6,000 depending on amperage, location, and complexity. Costs increase if structural modifications, conduit rerouting, or meter socket replacements are required.

Labor for panel installation usually ranges 6–18 hours, with electricians charging $75–$120 per hour, plus potential permit fees.

Additional Considerations

Permits and inspections: Local codes may require permits, adding $50–$200 or more. Complex routing: Running wires through multiple walls, floors, or ceilings increases labor. Material quality: Copper wiring is more expensive than aluminum but offers better conductivity and durability.

Hidden costs: Older homes may require rewiring or code upgrades, increasing total expenses.

Summary Estimate

For a typical residential project running wiring through walls to a new distribution box: Wiring: $5–$11 per linear footDistribution box installation: $1,200–$2,500 (100–125A indoor)Labor: 6–18 hours at $75–$120/hourPermits and miscellaneous: $50–$600 Overall, a small to mid-size home project could range $1,500–$5,000, while larger or more complex installations may exceed $6,000 depending on panel size, wiring length, and wall accessibility.
