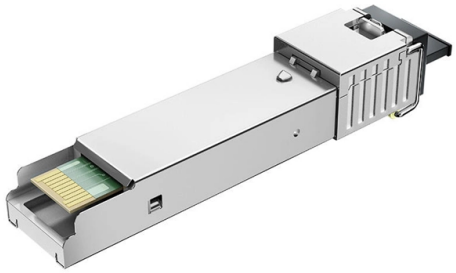
Saudi Arabia s renowned seismic bracing system for cable trays



Overview

B-Line series support systems for Middle East | EatonEaton offers a wide variety of electrical and mechanical support systems for facility sub-system syste.

Key Takeaways

Saudi Arabia utilizes advanced seismic bracing systems for cable trays, provided by leading local manufacturers like Ba'Amer Electric, Adhwa Al-Rawafid, Wescosa, and MECSS, ensuring compliance with international standards and robust earthquake-resistant performance.Leading Manufacturers and Solutions

Ba'Amer Electric is a prominent Saudi manufacturer of cable management support systems, offering innovative designs and seismic-ready solutions for cable trays and related supports, serving the Kingdom and GCC countries since 2003 . Adhwa Al-Rawafid Electric Industries, based in Dammam, specializes in cable trays, fittings, and ancillary supports made from corrosion-resistant materials such as hot-dipped galvanized steel. Their systems are ISO 9001-2015 certified and designed for industrial and commercial applications, including seismic considerations . Wescosa provides a complete range of cable tray systems, including perforated trays, cable ladders, and strut channels. Their products are manufactured according to NEMA and IEC 61537 standards, with welded rungs and reinforced side rails to enhance structural integrity under seismic loads. Materials include aluminum alloys, stainless steel, and fiberglass, with optional powder coatings for durability . MECSS (Middle-East Cable Support Solutions) has over 20 years of experience in producing cable trays, ladders, and trunking systems suitable for seismic applications, serving industrial, commercial, and critical infrastructure projects across the Middle East .

Seismic Bracing Systems

For specialized seismic bracing, Gripple's GS10-20E4-S4-2P kit is an example of a system used in Saudi Arabia for nonstructural components, including cable trays. These systems are designed to maintain the integrity of essential facilities during earthquakes, ensuring that cable trays remain securely supported and functional in emergency conditions .

Materials and Installation

Seismic cable tray systems in Saudi Arabia typically use hot-dipped galvanized steel, stainless steel (304/316L), aluminum alloys, or fiberglass, depending on environmental and load requirements. Installation includes anchoring, bracing, and cross-supports to resist lateral and vertical seismic forces. Optional covers and accessories provide additional protection and compliance with safety standards .

Applications

These seismic bracing systems are widely used in power plants, oil refineries, desalination plants, commercial buildings, and offshore platforms, where maintaining cable integrity during seismic events is critical .

Key Takeaways
• Saudi Arabia has a mature cable management industry with ISO-certified manufacturers providing seismic-ready solutions.

• Systems comply with international standards (NEMA, IEC 61537) and are designed for earthquake resilience.

• Seismic bracing kits, such as those from Gripple, are integrated into cable tray installations to ensure structural stability and operational continuity during seismic events. These solutions collectively make Saudi Arabia a leader in robust, earthquake-resistant cable tray systems in the Middle East.
