

Cable tray single-sided tee specifications and dimensions

Overview

Cable Tray Dimensions Guide: Standard Sizes, Tray Explore standard sizes by tray type, understand width and depth limits, and see how to Resources for Cabl.

Key Takeaways

Single-sided tee cable trays are available in equal or unequal widths, constructed from steel or aluminum, and designed to meet NEMA/CSA load ratings with a 1.5 safety factor. General Description

A single-sided tee is a cable tray fitting that allows a branch to diverge from a main tray run at a 90° angle. These tees can be equal or unequal, depending on the widths of the main and branch trays, and are typically specified using the format W1 x W2 x W3, where W1, W2, and W3 represent the widths of the main run and branch sections .

Material and Construction

- Materials: Steel (hot-dip galvanized, stainless, or painted) or aluminum .
- Side Rails: Extruded I-beam or fabricated steel/aluminum, nominal heights typically 4-8 inches .
- Bottom Type: Ladder, ventilated, solid, or channel, depending on cable support and ventilation requirements .
- Rungs/Supports: Spaced to allow proper cable support, often 12 inches center-to-center for ladder types .

- Finish: Smooth edges and welds to prevent cable damage; zinc or epoxy coatings for corrosion resistance .

Load Ratings

- Safety Factor: 1.5 applied to all tray sections .
- Concentrated Load: Supports an additional 200 lb on any portion of the tray beyond published load class .
- Span Deflection: Deflection measured at midpoint; continuous spans may reduce deflection by up to 50% .

Standards and Compliance

- NEMA VE 1: Metallic cable tray systems .
- CSA Load Classes: C/3M or as specified for the project .
- ASTM Standards: A123, A653, A1011, A1008, B633 for steel and coating specifications .
- Electrical Codes: ANSI/NFPA 70 (NEC) compliance .

Ordering Information

- Specify widths (W1 x W2 x W3) and material.
- Indicate tray type (ladder, solid, ventilated) and finish.
- Include load class and any special requirements for branch angles or radius .

Installation Notes

- Use splice plates or connectors provided with each fitting for secure attachment .
- Ensure proper grounding and electrical continuity according to NEC and manufacturer guidelines .
- Verify that the tee aligns with the main tray run and supports the intended cable load without exceeding deflection limits . This specification ensures that single-sided tee cable trays are mechanically robust, electrically safe, and compatible with standard cable management systems.
