State Grid logo on power relay protection panel

Overview

Primary Protection Relays | ABBABB's Relion family of protection and control relays for primary distribution offers a wide range of products for protection.

Key Takeaways

The State Grid logo is typically displayed on power relay protection panels to indicate ownership, branding, and compliance with State Grid Corporation of China standards. Purpose of the LogoThe State Grid logo on a relay protection panel serves several purposes: Ownership and Identification: It signifies that the panel is part of the State Grid Corporation of China's infrastructure, helping operators and maintenance personnel quickly identify the equipment as belonging to the utility. Branding and Standardization: The logo ensures consistent visual identification across substations and control rooms, reinforcing corporate identity.

Compliance and Documentation: Panels with the logo often meet State Grid technical and safety standards, which may include relay programming, wiring, and protection schemes. Placement on PanelsThe logo is usually placed on the front door or faceplate of the panel for visibility. It may appear alongside manufacturer labels (e.g., Schneider Electric, Siemens, ABB) and panel identification numbers.

In some cases, the logo is included in schematic diagrams or documentation to indicate the panel's association with State Grid systems.

Design and Format

The logo is available in PNG, SVG, AI, EPS, and CDR formats, allowing it to be printed or engraved on panels without loss of quality. Panels are often custom-designed to accommodate the logo along with other operational indicators, such as relays, annunciators, and test blocks. Integration with Relay Protection PanelsModern relay protection panels include multifunction relays, control devices, and communication interfaces.

The logo does not affect functionality but provides a clear visual cue of the panel's ownership and compliance. It is common in factory-assembled panels where the logo is applied during production, ensuring uniformity across multiple installations. In summary, the State Grid logo on a power relay protection panel is primarily a visual identifier for ownership, standardization, and compliance, typically placed on the front of the panel and integrated into both physical and schematic representations of the system.
