

Cold Aisle Cabinet Cold Aisle Low Temperature Resistance Manufacturers

Overview

By maintaining consistent, predictable temperatures, cold aisle containment minimizes thermal stress and reduces the risk of overheating, improving reliability and extending equipment lifespans.

Key Takeaways

Leading manufacturers of cold aisle containment systems include Lepin Network, EDP Europe, Legrand, Cool Shield, and Tate, all offering modular, customizable solutions designed to maintain low temperatures and improve data center cooling efficiency. Key Manufacturers and Offerings¹. Lepin Network Lepin Network provides modular row-based cold aisle containment systems that separate cold and hot air streams, improving cooling efficiency and reducing operating costs by 20-50% if properly installed.

Their systems feature dual mechanical or sliding doors, modular panels, and scalable designs suitable for future expansion. ².

EDP Europe ED

P Europe designs and installs bespoke aisle containment systems for new builds, retrofits, and hyperscale projects. Their solutions include both cold aisle and hot aisle containment, with custom infill panels to accommodate obstacles or varying rack heights. They offer scalable, modular systems that can be floor-standing or ceiling-suspended, with global support from engineering and installation teams.

3. Legrand's cold aisle containment systems create enclosed corridors in front of server cabinets, ensuring cold air is delivered directly to equipment intakes. Their modular Contain-IT FLEX system allows flexible configurations, pre-fabricated components for faster on-site assembly, and improved airflow management to reduce energy consumption and extend equipment lifespan.

4. Cool Shield (WAVE) Cool Shield, under Worthington Armstrong Venture (WAVE), provides state-of-the-art hot and cold aisle containment solutions. Their systems optimize energy use, maintain consistent supply temperatures, and are suitable for both new and existing data centers.

They offer turnkey, customizable solutions with modular designs for easy adaptation to facility layouts. 5. Tate's Cold Aisle Containment (CAC) systems capture cold air from CRAH or CRAC units and enclose it within the aisle to prevent mixing with hot exhaust air.

Built from robust aluminum frames and polycarbonate panels, Tate's systems are fully customizable in length, width, and height, with options for sliding or hinged doors, roof panels, and gasketed seals to optimize containment performance.

Considerations for Low Temperature Resistance

When selecting a manufacturer, consider: Material durability: Aluminum frames and polycarbonate panels are common for low-temperature resilience. Modularity and scalability: Systems should allow future expansion or reconfiguration. Airflow management: Proper sealing and containment prevent hot/cold air mixing, maintaining consistent low temperatures.

Customization: Bespoke solutions ensure compatibility with existing racks, raised floors, and ceiling layouts. These manufacturers provide solutions that not only maintain low temperatures but also enhance energy efficiency, reduce hotspots, and improve overall reliability of data center operations.

Article Content

Cold Aisle Containment | Legrand

By maintaining consistent, predictable temperatures, cold aisle containment minimizes thermal stress and reduces the risk of overheating, improving reliability and extending equipment lifespans.

Tate Cold Aisle Containment System

Tate's Cold Aisle Containment (CAC) system efficiently captures cold air from the CRAH or CRAC unit via an underfloor plenum, ensuring the I.T equipment is

Aisle Containment

Upgrade your data center with our conversion kit for efficient hot/cold aisle containment. It transforms single-row end-of-row frame into a wider, U-shaped

KabinPLUS Aisle Containment Solutions

Cold Aisle Containment for rack cabinets with single or double sliding doors and sliding roof frame units fabricated out of aluminium, with polycarbonate panel material and fire nozzle entry sections.

Cold Aisle Containment System | Contech Solutions

Cabinet Supported Cold Aisle Containment (CAC) Solution isolates a room's cold air supply and confines it to an entirely closed off area targeted at cooling IT

Lepin Network | Cold Aisle Containment system

The aisle containment system is a modular rowbased thermal containment solution, which separates cold and hot data center air streams to and from equipment. It manages airflow at the source,

Cold Containment | Legrand Data Center Solutions

Data centers opting for cold containment deliver cold air through a raised floor into the aisle. This air is contained in front of the cabinets, creating a homogeneous air plenum at the desired temperature.

Custom Data Center Containment Solutions

AIRSEAL is 100% focused on designing, manufacturing, and installing the highest quality, best value containment systems for Data Center Hot Aisle and Cold Aisle bypass airflow containment, and

Aisle Containment | Faztek Industrial Solutions

Hot and cold aisle containment systems made from Faztek's aluminum extrusion profiles are not only flexible but fully scalable allowing your containment system to grow as you do.

Altimir - Data Center Solutions

Altimir designs, fabricates, and installs energy-efficient, custom-engineered Hot Aisle and Cold Aisle Containment Systems. Recognized for the quality of its products, the company's products are

Hot vs Cold Aisle Containment: Which Datacenter Cooling Strategy Is ...

Energy Efficiency Comparison Hot aisle containment typically delivers superior energy efficiency compared to cold aisle containment. HACS creates higher return air temperatures (95

OPTIMIZED ENERGY EFFICIENCY WITH CONTROLLED COLD AISLE

A small amount of the cold air flows controlled through the air control opening of the angular extrusion of the cold aisle containment in which the T1 temperature sensor is positioned. This temperature

Aisle containment system buying guide

Aisle containment system buying guide Discover the key factors to consider when choosing a hot aisle/cold aisle containment system. This buying guide will help you understand the features of an

Technical Paper

Hot aisle / cold aisle containment Designed to prevent air temperature zones mixing together in a data centre, hot and cold aisle containment increases cooling efficiency, while reducing power

What are hot and cold aisles in the data center?

Hot/cold aisle layout By contrast, when racks are grouped so that heating and cooling sides alternate, it creates hot and cold aisles as shown in Figure 2. This arrangement generates less

Lepin Network | Cold Aisle Containment system

Aisle containment in the data center requires that cabinets are aligned in a hot aisle/cold aisle layout. Containment panels or strips create a partition to isolate either the server supply air (cold aisle

IMPROVING DATA CENTER EFFICIENCY AND CAPACITY WITH AISLE

In addition to these integrated solutions, a number of third party manufacturers have developed containment solutions that work with most types of cabinets and that can be used in either the hot

Data Center Aisle Containment Systems | Profile IT

Explore 30 hot aisle, cold aisle, structural, door, roof, flexible containment and airflow-control products for data centers. Engineering and installation by Profile
