

Data Center Cabinet-Type Power Distribution Box

Overview

Cabinet Power Distribution Units (PDUs) are a type of PDU that is specifically designed to be mounted in a server cabinet or enclosure to provide power distribution to IT equipment, servers, and other connected devices. This article explores how power is connected inside modern data center racks, examining the flow of electricity. The Liebert® RXV remote power distribution cabinet provides dense power distribution in a small footprint, with up to 400 Amp inputs and 84 poles in a single 24"x12" panelboard. Whether you are planning a traditional enterprise data center, an edge computing site, or a modular deployment, this guide will help you understand how modern data centers stay powered, protected, and scalable—with support from E-abel's professional electrical enclosure solutions. The space-saving PDU is easy to move and adapt to the future demands of the data center.
