

# Does Luxshare Precision make optical modules

## Overview

Optical Interconnect Products and Solutions Accelerate Your AI Infrastructure with Next-Gen Optical Interconnect Solutions. Unlock breakthrough data center.

## Key Takeaways

Yes, Luxshare Precision manufactures optical modules, including high-speed pluggable transceivers for data centers and AI applications.

Luxshare Precision is actively involved in the production of optical modules and transceivers, covering data rates from 10G up to 1.6T and supporting major form factors such as SFP, QSFP, and OSFP . Their optical modules include DPO (Digital/Retimed Pluggable Optics), LRO (Low-Power Linear-Receive Optics), LPO (Linear Pluggable Optics), and Active Loopback designs, which are used in high-performance data centers, cloud computing, AI, and HPC environments . These modules are engineered for reliability, energy efficiency, and broad compatibility with industry standards. Luxshare also serves as a contract manufacturer, assembling optical modules at scale for other companies, making them a key player in the photonics supply chain . Recent reports indicate that 800G and 1.6T optical modules have entered small-batch supply, with ongoing development for broader commercialization . Their products often integrate optical engines from partners like POET Technologies, demonstrating collaboration in advanced silicon photonics solutions . In addition to optical modules, Luxshare's portfolio spans high-speed interconnects, optical fiber assemblies, and AOC (Active Optical Cable) solutions, providing end-to-end optical interconnect products for AI, cloud, and hyperscale data center applications . This positions Luxshare as a significant contributor to modern data transmission infrastructure, supporting both enterprise and hyperscale networking needs.
