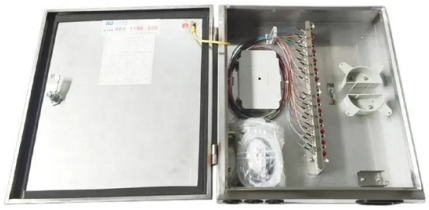
Features of Austrian Ladder-Type Fiberglass Cable Trays



Overview

FIBERGLASS CABLE LADDER TRAY Enduro fiberglass cable ladder tray is designed specifically to endure the harshest environments and increase operational safe.

Key Takeaways

Austrian ladder-type fiberglass (FRP) cable trays are lightweight, corrosion-resistant, fireproof, and designed for harsh industrial environments, offering excellent durability and ease of installation.Material and Structural Properties

Austrian FRP cable trays are made from high-strength glass fiber reinforced plastic (FRP/GRP), providing a lightweight yet robust structure that can support heavy cable loads while reducing stress on building frameworks . The ladder-type design features side beams and crossbars, creating an open structure that allows efficient heat dissipation, air circulation, and easy visual inspection of cables . This open design also facilitates cable addition, removal, and maintenance, improving operational efficiency .

Environmental Resistance

These trays are highly corrosion-resistant, making them suitable for chemical plants, marine environments, wastewater treatment facilities, and other corrosive industrial settings . They are also fireproof, UV-resistant, and non-conductive, ensuring safety in environments where electrical insulation and exposure to sunlight or chemicals are concerns . FRP trays outperform traditional steel or aluminum trays in harsh conditions, as they do not rust or degrade under chemical exposure .

Installation and Accessories

Austrian FRP ladder trays come with a comprehensive range of fittings, including tee sections, cross sections, internal and external bends (45° and 90°), horizontal bends, couplers, anchoring systems, and reducers . They are available in solid or ventilated tray designs, with pre-drilled straight sections for faster installation. Covers are offered in flat, clamp-less, or peaked designs, providing water and debris runoff while maintaining easy access for maintenance . The trays are engineered for a 50-year design life, ensuring long-term reliability .

Performance Advantages
• Lightweight and high-strength: Easier handling and reduced structural load .

• Excellent insulation: Non-conductive material enhances electrical safety .

• Durable in harsh environments: Resistant to chemicals, UV rays, and moisture .

• Maintenance-friendly: Open ladder design allows quick cable inspection and modifications .

• Customizable dimensions: Available in various widths, heights, and thicknesses to suit project requirements . These features make Austrian ladder-type FRP cable trays a reliable and efficient solution for industrial, offshore, and specialized cable management applications, combining durability, safety, and ease of installation.
