Fusion Splicing of Fibers – electric discharge, fusion splicers

Fusion splicing of fibers is a technique of making low-loss fiber joints by fusing fiber endfaces together. It is widely used in fiber optics.

Tutorial Passive Fiber Optics, Part 6: Fiber Joints

Another technique is fusion splicing, where the fibers are fused together, e.g. using an electrical arc. This leads to particularly low insertion loss and high return loss, if the two fiber cores are similar.

The FOA Reference For Fiber Optics

Multimode fibers can be harder to fusion splice as the larger core with many layers of glass that produces the graded-index profile are sometimes harder to match up, especially with fibers of

Can you splice optical fiber with different core size by fusion splicer

It is possible to splice two optical fibers with different core sizes by fiber fusion splicer, but you need to be careful. If you are splicing single-mode fiber to multimode fiber, avoid direct
