

Fiber optic module duplex lc interface

Overview

A Duplex LC Fiber Loopback Module is a testing tool designed to create a loop in a fiber optic network.

Key Takeaways

A fiber optic module duplex LC interface is a dual-fiber connector used in optical transceivers to enable simultaneous bidirectional data transmission.

A duplex LC interface combines two LC (Lucent Connector) connectors into a single compact housing, allowing one fiber to transmit signals (TX) and the other to receive signals (RX) simultaneously, which is essential for full-duplex communication in Ethernet and telecom networks. The LC connector uses a 1.25 mm ceramic ferrule, smaller than the SC connector, enabling high-density port layouts in data centers and network equipment.

Design and Components

- Ferrules: Two 1.25 mm zirconia ceramic ferrules align and protect the fiber cores.
- Housing/Body: A plastic shell secures the ferrules and provides mechanical protection.
- Latch: Push-pull clip allows easy connection and disconnection, even in crowded panels.
- Boot: Protects the cable at the exit point and reduces strain.

- Duplex Clip: Holds two simplex LC connectors together for a duplex pair . Duplex LC connectors are available in single-mode (SMF) and multimode (MMF) versions, with different polish types such as UPC (Ultra Physical Contact) for general use and APC (Angled Physical Contact) for applications sensitive to reflections, like DWDM or CATV .

Applications

Duplex LC interfaces are widely used in SFP, SFP+, and SFP28 optical transceivers, supporting 1G, 10G, and 25G Ethernet links . They are ideal for high-density network environments, such as data centers, enterprise backbones, and telecom transport networks, where space-saving and reliable bidirectional communication are critical . Proper handling, correct fiber polarity, and understanding TX/RX paths are essential for maintaining stable optical links.

Advantages

- Compact size for high-density port layouts
 - Precise fiber alignment for low insertion loss and high return loss
 - Bidirectional communication in a single connector
 - Compatibility with both single-mode and multimode fibers
 - Ease of installation with push-pull latching and duplex clips
- In summary, a fiber optic module duplex LC interface is a standard solution for connecting two fibers in a single module, enabling efficient, high-speed, and reliable bidirectional optical communication in modern network infrastructures.
