

Fiber optic transceivers self-operated multimode dual-fiber SC

Overview

Singlemode and Multimode Fiber Optic Transmitters, Receivers, Transceivers are available at Mouser Electronics.

Key Takeaways

Self-operated multimode dual-fiber SC transceivers are plug-and-play modules that transmit and receive data over two fibers, supporting short-range multimode connections with SC connectors. OverviewSC multimode dual-fiber transceivers are optical modules designed for short-range data transmission using two separate fibers: one for transmitting (Tx) and one for receiving (Rx) signals. These transceivers are commonly used in LANs, data centers, and enterprise networks where multimode fiber (typically 50/125 μm or 62.

5/125 μm) is deployed.

The S

C connector type ensures a secure, standardized connection compatible with most network switches and equipment.

Key Features

Data Rates: Typically range from 100 Mbps to 4. 25 Gbps, depending on the model.

Common Gigabit Ethernet SF

Ps operate at 1 Gbps. Wavelength: Multimode transceivers often use 850 nm for short-range connections, supporting distances up to 550 meters on 50/125 µm fiber or 275 meters on 62.5/125 µm fiber.

Plug-and-

Play: Many self-operated modules are hot-swappable, requiring no manual configuration. Users can insert the transceiver into a compatible port, and it automatically establishes the connection. Compatibility: Works with most switch vendors and network devices supporting SC multimode SFPs.

Applications: Ideal for Gigabit Ethernet, Fibre Channel, SONET/SDH networks, and other short-range optical communication systems.

Advantages

Ease of Installation: Self-operated modules simplify deployment, reducing configuration time and errors. Reliable Performance: Multimode dual-fiber transceivers provide stable data transmission over short distances with low latency. Flexibility: Available in standard, CWDM, and DWDM variants for networks requiring wavelength multiplexing.

Selection Considerations

When choosing a multimode dual-fiber SC transceiver, consider: Distance Requirements: Ensure the transceiver supports the fiber type and distance of your network. Data Rate: Match the transceiver speed with your network equipment. Connector Type: SC connectors are standard, but verify compatibility with existing cabling.

Wavelength: 850 nm is standard for multimode; ensure it aligns with your fiber specifications. Vendor Compatibility: Some transceivers are vendor-specific, while others are universal. Sources and Availability SC multimode dual-fiber transceivers are widely available from distributors like Mouser Electronics and DigiKey, which provide datasheets, pricing, and inventory for various models.

Opticonnect offers a range of dual-fiber SFPs supporting multimode and single-mode fibers, including CWDM and DWDM options for advanced network setups. These transceivers are ideal for users seeking plug-and-play, self-operated solutions for short-range multimode fiber networks with SC connectors.
