Find the IP address on the core switch

Overview

How to find the IPs connected to an Access SwitchIn this figure, you can find a Core Switch and two Access switches connected to it. There are two end devi.

Key Takeaways

You can find a core switch IP address using direct console access, network scanning tools, DHCP server lookups, or by tracing connected devices through MAC addresses and CDP/LLDP. 1.

Direct Console Access

The most reliable method is to connect directly to the switch using a console cable. Once connected, access the switch's CLI and enter privileged EXEC mode. Use the command show ip interface brief to display all interfaces and their assigned IP addresses.

Look for the interface associated with the management VLAN (often VLAN 1) to identify the switch's IP address. 2.

Using DHCP Server Lookup

If the switch obtains its IP address via DHCP, you can check the DHCP server's lease table. Log into your router or DHCP server, navigate to the DHCP client list, and look for a device with a hostname or model number corresponding to the switch. The listed IP address is the switch's management IP.

3.

Network Scanning Tools

Network scanning tools like Nmap or Angry IP Scanner can scan your subnet to identify all connected devices. Look for devices with MAC addresses or hostnames that match your switch. This method is useful if you do not have direct access to the switch or DHCP server.

4. Tracing from Connected DevicesIf you know the IP or MAC address of a device connected to the switch, you can trace the path to the core switch: On a Cisco network, use show mac address-table address to find the port the device is connected to. If the port is a trunk, use show cdp neighbor detail or show lldp neighbors to find the next switch in the path.

Repeat this process until you reach the core switch, then use its management interface to determine its IP. 5. Using CDP/LLDP from Another DeviceIf you have access to another Cisco device on the same network, you can use Cisco Discovery Protocol (CDP) or Link Layer Discovery Protocol (LLDP) to discover neighboring switches and their management IP addresses.

Commands like show cdp neighbors detail provide the IP address of connected switches.

Summary

To find a core switch IP address, you can: Connect directly via console and check the management VLAN interface. Look up the switch in the DHCP server's lease table. Scan the network using tools like Nmap.

Trace connected devices using MAC addresses and CDP/LLDP. These methods ensure you can locate the switch's IP for configuration, monitoring, or troubleshooting purposes.

How to find the IPs connected to an Access Switch

Hi, Please find the figure below In this figure, you can find a Core Switch and two Access switches connected to it. There are two end devices PC0 and PC1 connected to Switch A and B respectively.

How to trace end user connected from which L2 switch

This should give you the definitive information on which switch and port the IP address is connected to. By following these steps, you should be able to pinpoint which switch and port an IP

How to find a Cisco Switch ip address?

© 2026 ALFA PRO COMMUNICATION SYSTEMS (Pty) Ltd - All rights reserved

Several approaches can be employed to identify the IP address of a Cisco switch, each with its own advantages and limitations. 1. Direct Console Access. The most reliable method is to

How do I find the IP of the SWITCH that I''m connected to?

Finding the IP address of the switch you''re connected to depends on whether the switch is managed and whether discovery protocols or network records are available.

How to Find IP of a Switch?

Log into your router''s configuration interface. Locate the DHCP server log or client list. Find the entry with the switch''s MAC address. The corresponding IP address is the switch''s IP.

How to find ip address on Cisco Switch?

This article provides a comprehensive guide to locating IP addresses associated with Cisco switches, covering various methods and utilizing relevant command-line interface (CLI) commands.

Check all the active IP addresses on a switch

IP is a layer-3 protocol, and IP addresses are in the packet headers, which are encapsulated inside the ethernet frame. A switch doesn''t strip off the frame to look at the IP headers

How Do I View IP Addresses of Servers Directly Connected to a

How Do I View IP Addresses of Servers Directly Connected to a Switch and Server Interfaces Connected to the Switch? You can run the display arp command to view IP addresses and

How To Get IP Address Of A Network Switch

Learn how to obtain the IP address of a network switch using simple steps and understand the importance of this information for network management. Discover the various
