

Grounding terminal bolt of distribution box

Overview

When inspecting the interior of a stainless steel outdoor electrical box distribution box, pay attention to the copper or tin-plated terminals on the base plate or side walls. These locations are usually marked with grounding symbols for easy cable crimping. Each DISTRIBUTION BOX and controller must be grounded. 26 mm² (10 AWG) ground wire must be used, and in all other markets a 6 mm² must be used. It's the central hub designed to safely channel dangerous fault currents away from your equipment and, more importantly, away from your personnel. Grounding Bar: This refers to a bar that can connect many ground conductors, and is typically attached to the backpanel. 7 Provide conduit grounding bushings, bonded together and connected to the equipment enclosure on all incoming and outgoing conduits on distribution switchgear and switchboards, distribution panels and on all conduits over 1-1/4" diameter at all panelboards, pull boxes and equipment.
