

How much does a router's optical module cost

Overview

Optical Transceiver Pricing: Cost Ranges by Speed and Type This article compares typical cost ranges across speeds and transceiver types, explains why price.

Key Takeaways

Router optical modules typically range from \$5 for basic 1G SFPs to several hundred dollars for high-speed 100G QSFP28 modules, depending on type, reach, and brand.

Cost Overview by Module Type
1G SFP Modules: Basic compatible modules can cost \$5-\$25, while OEM-branded or industrial-grade modules may range from \$60-\$120.

10G SFP+ Modules: Compatible short-reach modules often sell for tens of dollars, whereas OEM long-reach or special-spec modules can cost hundreds of dollars.

40G QSFP+ Modules: Prices vary widely depending on reach and vendor, typically ranging from \$100 to \$500 for standard modules, with longer-reach or OEM modules costing more.
100G QSFP28 Modules: OEM modules can cost \$780-\$2,200 per unit, while compatible third-party modules may be available for \$35-\$280, depending on reach and coding requirements.

Factors Affecting Price

Branding: OEM modules (Cisco, HPE, Juniper) are significantly more expensive than third-party compatible modules due to warranty, support, and verified compatibility.

Speed and Reach: Higher-speed modules (40G, 100G) and long-reach or extended-temperature modules cost more due to advanced optics and design.

Volume and Procurement: Bulk purchases can reduce per-unit cost, especially for third-party modules, while OEM discounts may be limited.

Special Features: Coherent optics, DWDM compatibility, and software-configurable line rates increase module cost.

Practical Considerations

Compatibility: Third-party modules can offer substantial savings but require verification for switch/router compatibility. Warranty and Support: OEM modules often include full vendor support, which may be critical for enterprise or data center deployments. Deployment Scale: For large-scale deployments, third-party modules can reduce CAPEX by 70–90% without compromising performance.

In summary, router optical module costs vary widely, from a few dollars for basic 1G SFPs to over \$2,000 for high-end 100G OEM modules, with third-party alternatives providing significant cost savings while maintaining similar performance.
