

How to configure the IP address of a TEFA industrial switch

Overview

How to Configure a Switch IP Address To configure an IP address on a network switch, follow these general steps. Exact commands and menus may vary by vendor.

Key Takeaways

You can configure a TEFA industrial switch IP address via its console, web GUI, or SSH by setting either a static IP or enabling DHCP, then saving and verifying the configuration.

Accessing the Switch Management Interface

Connect to the switch using a console cable, Ethernet cable to the management port, or SSH if the switch is already networked. Launch terminal software (e.g., PuTTY, Tera Term) for console access or open a web browser for GUI access. Log in using the default or previously configured username and password.

Configuring a Static IP Address Navigate to Network Settings → IP Configuration in the web GUI or enter global configuration mode in CLI. Select Static IP.

Enter the I

P address, subnet mask, and default gateway appropriate for your network. If applicable, specify the management VLAN to ensure the IP is assigned to the correct interface. Save the configuration and reboot the switch if required.

Configuring DHCP

In the web GUI, select DHCP or “Obtain IP address automatically”.

In CL

I, enable the DHCP client mode on the management interface. Save the configuration and reboot if necessary. Verify that the switch has obtained an IP from the DHCP server.

If no DHCP server is available, the switch may fall back to a default IP.

Verification

Ping the switch from a connected computer to confirm connectivity.

Check the I

P address assignment in the web GUI or CLI. Ensure there are no IP conflicts with other devices on the network.

Best Practices

Perform I

P changes during a maintenance window to avoid network disruption. Back up configurations before making changes. Use secure protocols like SSH or HTTPS for management access.

Document the I

P address and VLAN assignments for future reference. Following these steps ensures that your TEFA industrial switch is correctly configured for network management and communication in an industrial environment.
