

How to seal up cable trays in vertical shafts

Overview

Firestopping Requirements for Cable Trays and Sealing shall be tight and reliable, without visible cracks or voids. For large openings, install a fire-resi.

Key Takeaways

Cables in vertical shaft trays should be sealed using firestop packs, intumescent caulks, or watertight seals to ensure fire protection, water resistance, and mechanical stability.

Firestopping in Vertical Shafts

When cables pass through vertical shafts, walls, or slabs, all openings must be tightly sealed with firestopping materials to prevent fire and smoke spread. Common materials include fire-rated boards, firestop packs, firestop mastic, and fire-resistant mineral wool. For large openings, a fire-resistant backing plate should be installed before sealing.

Firestop packs should be placed in an orderly sequence, ensuring that gaps between packs and cables do not exceed 1 cm² and packing thickness is sufficient, typically not less than 24 cm. All gaps inside and around metal trunking must be sealed both internally and externally, and cover plates should be square, evenly painted, and properly fitted.

Watertight Sealing

For vertical cable tray runs, especially in concrete pull boxes or outdoor/wet environments, watertight penetration is critical. Individual cable seals using pressure-fit seals are recommended for a truly watertight solution. Specialist products like Roxtec or Hawke transit systems can be used if installed correctly.

Alternatively, a dam can be built around the cable penetrations and filled with flowable silicone, such as Dow Corning 734, which fills all crevices and cures to form a watertight barrier.

Mechanical Fixation and Cable Management

Vertical cable installations must account for cable weight and tension. Use high-tensile steel wire armor, pulling grips, or socks to prevent cable rupture during installation. Fail-safe mechanisms should be in place to prevent free fall in case of a pulling wire failure.

Once installed, cables should be properly fixed with mounting brackets, clamps, or cleats that maintain constant lateral clamping force, avoiding slippage or mechanical deformation due to thermal expansion or load cycling.

Installation Sequence

Complete floor and wall finishes in the shaft and install shaft doors. Install cable trays and busways, ensuring proper alignment. Route cables carefully, considering weight and bend radius.

Apply grounding and waterproofing measures. Seal all penetrations with firestop packs, mastic, or watertight seals. Install cover plates or protective barriers to complete the seal.

Key Considerations

Ensure no closed loops of ferromagnetic steel in the shaft to avoid interference. Maintain minimum bend radius for cables exiting trays. Use UL-listed firestop systems and follow manufacturer instructions for compliance.

Plan installation carefully to allow for maintenance and future cable additions. By combining firestopping, watertight sealing, and mechanical fixation, vertical shaft cable trays can be safely and effectively sealed, ensuring compliance with safety standards and long-term reliability.

Sealing shall be tight and reliable, without visible cracks or voids. For large openings, install a fire-resistant backing plate before sealing. Layout and

Cable Tray Technical Guide A practical guide to product selection and ...

In designing supports for a cable tray system, consideration should be given to the loads associated with future cable additions and any additional loading that may be applied to the cable tray system (e.g.,

Vertical Cable Tray Installation

Complete vertical cable tray installation guide: materials, grounding, firestop, and GB standards compliance for reliable electrical systems.

Cable Tray Penetration Seals

Cable Tray Penetration Seals provide a barrier between rooms protecting equipment from smoke and fire. Materials allow for future cable pulling and routing. Ability to remove penetration seals for cable

CSD Sealing Systems: Weatherstops

The frame can be opened and closed repeatedly to allow for cable maintenance and additions. The sponge rubber pads are compressed around the penetrating items and can be easily cut to fit around

Firestop

The following charts give the number of 3M pillows needed to completely firestop an opening that cable tray passes through.* Two (2) sticks of moldable putty (part number FSP-MPS) are also needed for

Firsto System | CSD Sealing Systems

FIRSTO firestops are designed to seal multi-cable and cable tray penetrations of fire-rated walls and floors. FIRSTO fire stops are developed as a modular system which is simple to assemble around

Cable and pipe seals

Where to use Roxtec? You find roxtec cable and pipe seals in many applications throughout the construction industry. Discover the idea behind our innovative sealing solutions and learn how to

Watertight Cable Tray

Sealing the cables individually with pressure fit seals is the only way you're likely to get a truly watertight penetration in the circumstance. As Waross noted their preference, almost any

Cableizer

There are different ways to do such an installation, for example using a second steel wire for breaking or by pushing instead of pulling the cable using

Effective weatherproofing for cable trays | Jones Weatherproofing

In vertical wall penetrations, weatherproofing cable trays is often carried out using a weatherstop sealing system. From the outside, this looks like ductwork or a series of boxes attached

GENERAL INFORMATION

Cable trays or raceways often provide a convenient, safe and efficient method of fiber optic cable installation. Trays can be installed in ceilings, below floors and in riser shafts. When installing fiber

CABLE TRAY

The weight per meter (foot) of the cable multiplied by the number of meters (feet) in the vertical drop will, in many cases, exceed the load carrying capacity of the cable tray component, such as the one or

A Guide to Installing and Supporting Electrical Cable Trays

A professional guide to installing electrical cable tray systems per NEC Article 392. Covers support, securing cables, and fill calculations.
