

How to unplug the fiber optic cable from a China Telecom broadband connection

Overview

Fiber optic cables provide blazing-fast internet speeds through pulses of light transmitted over glass fiber.

Key Takeaways

To safely unplug a fiber optic cable, first power down the modem or ONT, identify the connector type, and gently release it using the proper mechanism without bending or twisting the cable.

Step-by-

Step Guide1. Power Down the Device Before handling the fiber optic cable, unplug the modem or ONT from its electrical source. This ensures the fiber port is inactive and reduces the risk of exposure to infrared light, which can be harmful to your eyes.

2. Prepare the Workspace Clear the area around the modem to avoid accidental damage. Keep the environment free of dust or debris, as even microscopic particles can harm the fiber tip.

3. Identify the Connector Type China Telecom typically uses SC (Subscriber Connector) or LC (Lucent Connector) types for home broadband.

S

C connectors are square and use a push-pull mechanism with a plastic locking tab.

L

C connectors are smaller, resembling a miniature Ethernet plug, and use a clip or latch that must be squeezed to release. 4.

Stabilize the Modem or ON

T Hold the device steady with one hand to prevent it from moving while you disconnect the cable. This avoids stress on internal components. 5.

Release the Connector

For S

C connectors, depress the plastic tab and gently pull the connector straight out along its axis.

For L

C connectors, squeeze the latch and pull the connector straight out. Avoid twisting, bending, or applying lateral force, as this can damage the fiber. 6.

Cap the Exposed Connector After removal, place the supplied protective cap over the fiber end to prevent contamination and maintain signal quality. 7. Inspect and Test If you plan to reconnect the cable later, inspect the connector for dirt or damage.

Once reconnected, test the broadband connection to ensure proper functionality. 8. Seek Professional Help if Needed If the connector is stuck, damaged, or recessed, contact China Telecom or a certified technician to avoid permanent damage.

Following these steps ensures safe removal of a fiber optic cable from a China Telecom broadband connection while protecting both the cable and your equipment.
