

How to use optical cable strippers

Overview

Use the fiber strippers to strip ~1" (25mm) from the end of the fiber in 3 steps, about 1/4-3/8" (6-8mm) at a time. Hold the stripper at a 45degree angle to the fiber to reduce stress on the fiber. In an industry where precision is not just a goal but a requirement, the quality of your stripping tool directly impacts signal integrity, network reliability, and overall. This video will show you how to strip fiber optic cable strands. With an angled jaw to protect the fiber core, a handle built for comfort and three different precision. Fiber strippers are precision tools that reliably and cleanly remove a defined length of coating (often 30–40 mm) from a fiber end so that the bare glass is exposed without scratching or nicking it.
