

Industrial switch indicator light is red

Overview

In most industrial settings, red signals a fault or emergency, while green shows normal operation. Yellow warns of abnormal conditions that need attention. Common Applications: The most critical applications demand a red warning light, as it is the standard for communicating imminent danger or a serious malfunction. You will find it integrated into an emergency stop. Start/on actuators should be White, Grey, Black and Green. Emergency stop Color red and a combination of red button with yellow background only for emergency stop. Stop/Off Stop/off actuators should be black, gray or white. Do not use green. White, gray or black are colors for start/on and stop/off. Do. Operators must act quickly when they see a red led indicator light. WHITE, GREY and BLACK are the preferred colors for START / ON actuators, which cause the closing of switching devices and the equipment to start, with a preference for WHITE.
