

Italian 100G Optical Router

Overview

Open Fiber Tests 100 Gbps Connection Speeds in Italy Italian wholesale-only operator Open Fiber announced the successful testing of fiber optic Italian oper.

Key Takeaways

100G optical routers in Italy are being deployed using advanced coherent pluggable transceivers and high-capacity packet-optical platforms by operators like Open Fiber, Tiscali, and Telecom Italia. Overview of 100G Deployments in Italy

Italy has seen significant advancements in 100 Gbps optical networking. Open Fiber, in partnership with Nokia, has tested ultra-fast 100 Gbps fiber connections over its FTTH infrastructure, covering over 14 million homes, using next-generation Passive Optical Network (PON) technology to support high-speed, low-latency applications for businesses and consumers . Similarly, Tiscali and Telecom Italia are upgrading their terrestrial and submarine optical backbones with Alcatel-Lucent 1830 Photonic Service Switch (1830 PSS) platforms, enabling automated wavelength provisioning and scalable high-bandwidth services .

100G Optical Router Technology

Modern 100G optical routers rely on coherent pluggable transceivers such as QSFP28 100ZR modules. These modules integrate digital coherent signal processing, modulation, and detection in a compact form factor, allowing them to plug directly into existing router ports without replacing the infrastructure. Coherent optics support dense wavelength division multiplexing (DWDM), enabling up to 9.6 Tb/s on a single fiber pair, which is ideal for scaling metro, access, and data center interconnect networks. Nokia's PSE-QDCO1 and Ciena's WaveLogic 6 Extreme are examples of pluggable coherent optics used in Italy. They support 100Gb/s transmission over distances ranging from 80 km (unamplified) to 300 km (multi-span amplified), making them suitable for metro, regional, and long-haul applications. These transceivers also feature low power consumption.
