

Manufacturer of unarmored outdoor optical cables

Overview

Find your outdoor optical cable easily amongst the 58 products from the leading brands (LEMO, CORNING, HUBER+SUHNER, ...)

Key Takeaways

Leading manufacturers of unarmored outdoor optical cables include HTL Ltd., Corning, CommScope, and AFL, offering dielectric fiber optic solutions for duct, aerial, and direct-burial installations. Key Manufacturers and Offerings

HTL Ltd. produces unarmored cables designed for Outside Plant (OSP) environments, suitable for installation in ducts underground using blowing or pulling methods. Their cables feature a rugged PE outer sheath, S-Z stranding, loose tube design, and longitudinal water-blocking compounds, making them ideal for dielectric applications near high-voltage lines. Corning offers a wide range of outdoor fiber optic cables, including loose tube and ribbon designs. Their unarmored dielectric cables are suitable for duct installation, aerial deployment, or direct burial. Loose tube cables include a central strength member and stranded buffer tubes, supporting fiber counts up to 432, while ribbon cables allow higher density and mass fusion splicing. CommScope provides non-armored outside plant fiber optic cables with dry or gel-filled tubes. These cables are engineered for durability and optical performance in outdoor environments, supporting broadband connectivity across global regions including North America, EMEA, and Asia. AFL manufactures non-armored, rodent-resistant, and dielectric outdoor fiber optic cables. Their portfolio includes loose tube, MicroCore, OSP, FTTx, and Uniflex cables, suitable for structured cabling and high-density deployments.

Considerations for Selection

- **Dielectric vs Armored:** Unarmored (dielectric) cables are preferred near high-voltage lines or in ducts where mechanical protection is provided by the conduit. Armored cables are necessary for direct burial in areas prone to rodent damage or mechanical stress.
- **Installation Method:** Cables can be installed via blowing, pulling, or jetted into ducts. Microduct systems may require smaller, lightweight micro cables.
- **Environmental Suitability:** Ensure the cable's outer sheath and water-blocking features match the deployment environment, including temperature extremes, UV exposure, and moisture conditions. These manufacturers provide reliable options for deploying unarmored outdoor optical cables in a variety of network infrastructures, from urban ducts to rural FTTH deployments.
