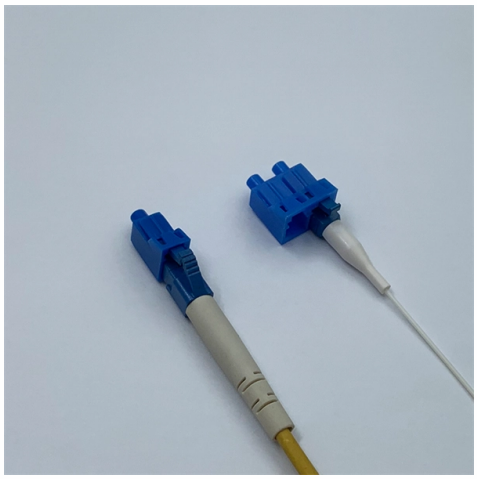
Mixed use of regular switches and PoE switches



Overview

Yes, PoE does not interfere with normal switch operation. In addition, many PoE switches can automatically disable the PoE part of the signal for ports that do not need/request/support it, making them more power-efficient. But is it possible to use the POE switch as a standard switch?

Of course, it is doable! But, depending on your device, you must choose the switch that best supports your desires. PoE devices are network equipment that can send out or receive the PoE power along with data, such as PoE switches, IP cameras, wireless access points, while non-PoE devices can only. A POE switch gives power to devices that support the protocol, like cameras and access points. A regular switch, on the other hand, merely supplies the internet signal. Firstly, I would like to give you some basic information about Network switches and POE (Power over Ethernet). If you can go through this article, I will resolve all inquiries about the POE switch.
