

Multi-circuit large distribution box

Overview

These boxes are designed to handle high current capacities — from 16 A to 63 A — and distribute them across multiple outlets with individual circuit breakers and RCD protection. Ideal for system upgrades, retrofits, or future circuit expansion, these extension boxes maintain a tidy and compliant set of low voltage electric insulating switchboards and industrial boxes. No matter how harsh the environment is, there is always a proper enclosure for your needs. Thanks to protection ratings and high quality build (from 65 x 65 mm up to 361 x 254 mm) plus 3 different cover heights are available. A distribution box is a low-voltage electrical enclosure that receives incoming power and distributes it safely to multiple outgoing circuits through protective and switching devices such as MCBs, RCDs, RCBOs, fuses, isolators, busbars, neutral bars, earth bars, and surge protective devices. The range of applications extends from pure energy distribution in buildings to building automation and through to industrial plants. SMART DISTRIBUTION BOXES FOR FLEXIBLE BUILDINGS.
