

Optical Amplifier SFP FOB Price

Overview

Understanding Optical transceiver Pricing helps procurement, network planning, and total cost-of-ownership decisions.

Key Takeaways

The FOB price for optical amplifier SFP modules typically ranges from \$5 to over \$120 for standard SFPs, while specialized optical amplifiers like EDFAs or SOAs can cost from several hundred to over a thousand dollars depending on specifications. SFP Module Pricing

Standard SFP transceivers, which may include low-power optical amplifiers, have a wide price range depending on brand, compatibility, and data rate. Generic or third-party 1G SFPs often sell for \$5–\$25 per unit, while OEM-branded modules from vendors like Cisco, HPE, or Juniper can range from \$60–\$120 or more. Higher-speed modules, such as 10G SFP+ or long-reach LR/ER types, can cost hundreds of dollars, especially for industrial or extended-temperature specifications.

Optical Amplifier Types and Pricing

Optical amplifiers in SFP form factor include:

- Semiconductor Optical Amplifiers (SOA): Compact devices that amplify weak optical signals, commonly used in fiber-optic networks. Prices vary but are generally in the hundreds of dollars per unit depending on power and wavelength.
- Erbium-Doped Fiber Amplifiers (EDFA): Used for long-distance fiber communications, these amplifiers can cost from several hundred to over a thousand dollars, depending on output power, wavelength, and packaging (indoor/outdoor).

- Granite Optical Amplifiers (GOA), Raman, and Laser Amplifiers: Specialized amplifiers for pulsed signals, telecom, or free-space applications, often priced higher due to performance requirements .

Factors Affecting FOB Price

- Brand vs Compatible: OEM-branded amplifiers are significantly more expensive than third-party compatible units.
- Data Rate and Reach: Higher-speed or long-reach modules increase cost.
- Environmental Specifications: Industrial-grade or extended-temperature modules command higher prices.
- Region and Supplier: FOB pricing depends on shipping origin, local taxes, and supplier agreements. For example, purchasing from China or Germany may offer competitive FOB rates due to local manufacturing and distribution networks .

Practical Guidance

- For budget-conscious deployments, compatible SFP modules with integrated optical amplification can be sourced for \$5–\$50 FOB.
- For high-performance or long-distance applications, EDFAs or SOAs may require \$300–\$1,500 FOB depending on specifications.
- Always confirm with suppliers for current FOB quotes, as prices fluctuate with market demand, component availability, and shipping costs. By considering these factors, you can estimate the FOB cost of optical amplifier SFP modules for your network deployment or procurement planning.
