

Power indicator light model of distribution box

Overview

AHDDX Power Signal Lamp for Distribution Box CL2-523 CL2-502LED signal lamp designed for power distribution boxes, ensuring reliable performance and visibility.

Key Takeaways

Power indicator lights in distribution boxes visually signal the presence of mains power and are available in various models, colors, and voltage ratings.

Power indicator lights, also known as signal lamps, are essential components in distribution boxes (DB boxes) that provide a visual indication of electrical power status. They help users quickly identify whether a circuit is live, enhancing safety and operational efficiency in residential, commercial, and industrial electrical systems.

Common Models and Specifications

- AD16-22 Series
- Mounting Hole Diameter: 22mm
- Voltage Compatibility: AC/DC, 220–380V
- Lamp Colors: Red, Green, Yellow, Blue, White
- Enclosure Material: Nickel-plated brass or stainless steel
- Connection Type: Screw terminal
- Features: Durable, LED light source, suitable for control cabinets and distribution boxes

- Eaton Distribution Parts
- Voltage Ratings: 24V or 230V AC/DC
- Lamp Colors: Red, Green, Orange, Red/Green twin lights
- Configuration: Single or twin lights
- Applications: Standard DB boxes for industrial and commercial use
- Schneider Electric Acti 9 iLL Series
- Voltage Range: 12–48V AC/DC, 110–230V AC, 230–400V AC
- LED Lifespan: Up to 100,000 hours
- Module Options: Single, double, or triple indicators with flashing options
- Safety: Front-facing Class II insulation, DIN rail mountable
- Applications: Visual monitoring of single-phase, three-phase, and low-voltage circuits

Key Features to Consider

- Color Coding: Red for fault or power on, green for normal operation, yellow for warning, blue or white for auxiliary signals.
- Mounting Type: Panel-mounted (22mm standard) or DIN rail modules.
- Voltage Compatibility: Ensure the indicator matches the DB box supply voltage (AC or DC).
- Durability: LED indicators offer longer life and lower maintenance compared to incandescent lamps.
- Safety: Insulated enclosures and secure terminal connections prevent electrical hazards.

Applications

Power indicator lights are used in residential, commercial, and industrial distribution boxes to:

- Indicate mains power availability
- Signal operational status of circuits
- Enhance safety by alerting users to live circuits
- Integrate with smart DB boxes for remote monitoring and energy management By selecting the appropriate model based on voltage, color, and mounting type, users can ensure reliable and safe visual indication of power in their distribution systems.
