

Price list for QSFP-DDSFP optical modules for data center interconnection

Overview

Find top QSFP optical transceiver modules for data centers. Compare 100G, 400G, ZR4, and LR4 options.

Key Takeaways

QSFP-DD optical module prices range from around \$1,400 for short-reach 400G SR8 modules to over \$130,000 for long-haul coherent ZR+ modules, with 800G modules generally priced at 60–70% of OEM list prices.

- **SR8 (Short Reach, 8x50G or 8x25G lanes):** Ideal for in-rack or cross-row connections, priced between \$1,400 and \$1,800 from reputable third-party vendors, making them the most cost-effective option for standard data center deployments .

- **DR4 and FR4 (Medium Reach):** Used for inter-row or campus links. Prices are competitive due to a strong third-party ecosystem, typically \$3,000–\$6,000, depending on vendor and volume .

- **LR4 (Long Reach):** Suitable for longer DCI links, OEM pricing can exceed \$10,000, while third-party alternatives may offer significant savings .

- **ZR and ZR+ (Coherent Long-Haul):** Designed for wide-area DCI, OEM modules can cost \$130,000+, representing the largest line-item expense in many deployments. Third-party options can reduce costs substantially .

800G QSFP-DD Modules

- **Short-Range 800G (8x100G or 4x200G):** Emerging for high-bandwidth data center interconnects, with transmission distances of 100m, 500m, and 2km. Prices are still stabilizing, with third-party modules typically 60–70% of OEM list prices .

- **Market Considerations:** 800G modules are less commoditized than 400G, and many enterprises prefer OEM modules for critical workloads due to DOM integration and firmware compatibility .

Vendor Options

- **OEM Modules:** Cisco, Broadcom, and other major vendors provide high-reliability modules with full support and warranty, but at a premium price .
- **Third-Party Modules:** Vendors like FS, FiberMall, and Unitekfiber offer cost-effective alternatives compatible with major OEM hardware, often at substantially lower prices for both 400G and 800G modules .

Summary

When planning data center interconnects:

- Short-reach 400G SR8 modules are the most economical starting point.
- Medium- and long-reach modules (DR4, FR4, LR4) increase costs progressively.
- Coherent ZR/ZR+ modules are the most expensive but necessary for long-haul DCI.
- 800G QSFP-DD modules are emerging, with prices currently higher and more variable, but third-party options can reduce costs by 30–40% compared to OEM pricing. Selecting the right module depends on distance, bandwidth requirements, and budget, with third-party vendors offering significant savings for non-critical deployments while OEM modules remain preferred for high-reliability or early-adoption scenarios.
