

Price of Fireproof Sealing Panels for Cable Trays

Overview

Fire protection for cables & cable trays | FlamroFire protection solutions to protect cables, cable trays and cable systems. Discover our tested cable coat.

Key Takeaways

Fireproof sealing panels for cable trays vary in price depending on material, fire rating, and manufacturer, typically ranging from \$50 to \$200 per panel or more for specialized high-performance systems.

Overview of Fireproof Panels

Fireproof sealing panels, such as the AF PANEL, are designed to protect cable tray penetrations in walls and floors, providing fire resistance up to EI 240 according to EN 1366 standards. These panels are made from semi-rigid mineral fibre with ablative coatings on both sides, allowing them to be cut and shaped on-site for precise installation. They are often used in combination with fireproof sealants, collars, or intumescent pillows to ensure complete fire and smoke protection.

Factors Affecting Price

Material and Density: Panels made from high-density mineral wool or treated with advanced ablative coatings generally cost more due to enhanced fire resistance and durability. **Fire Rating:** Higher EI ratings (e.g., EI 240 vs.

E

I 120) increase the cost because of stricter testing and certification requirements.
Panel Size and Thickness: Larger or thicker panels designed for wide cable tray penetrations require more material, raising the price. Certifications and Standards: Products certified under EN 1366-1, EN 1366-3, and EN 1366-4 or other international standards may carry a premium due to compliance with safety regulations.

Manufacturer and Brand: Established brands like Flamro and KBS offer tested and certified solutions, which can be more expensive but provide reliability and documented approvals.

Typical Applications

Industrial plants, power stations, and substations Hospitals, airports, and public buildings Offshore facilities and high-rise buildings
Cost Considerations While exact prices vary by supplier and region, standard semi-rigid fireproof panels for cable tray penetrations generally range from \$50 to \$200 per panel, with specialized or high-performance systems potentially exceeding this range. Additional costs may include fireproof sealants, installation labor, and custom cutting for complex penetrations. For precise pricing, contacting manufacturers or distributors such as Flamro, Hilti, or Wolman is recommended.

By considering the fire rating, material, and installation requirements, you can select panels that meet both safety standards and budget constraints for your cable tray project.
