Protective relay

Distance relays, also known as impedance relay, differ in principle from other forms of protection in that their performance is not governed by the magnitude of the current or voltage in the protected circuit

Basic protection relay knowledge

Definite time delay means that the protection operate time dose not change or depend on the fault type or the fault current magnitude. Inverse time delay, on the other hand, depends on the current

Time relays

The time delay relays in the COMBIFLEX portfolio consist of relays with pick-up delay, drop-out delay, or summation functions. Typical applications include delayed tripping in protection applications or as
