

State Grid logo on power relay protection panel

Overview

Primary Protection Relays | ABBABB's Relion family of protection and control relays for primary distribution offers a wide range of products for protection.

Key Takeaways

The State Grid logo is typically displayed on power relay protection panels to indicate ownership, branding, and compliance with State Grid Corporation of China standards.

Purpose of the LogoThe State Grid logo on a relay protection panel serves several purposes:

- Ownership and Identification:** It signifies that the panel is part of the State Grid Corporation of China's infrastructure, helping operators and maintenance personnel quickly identify the equipment as belonging to the utility.
- Branding and Standardization:** The logo ensures consistent visual identification across substations and control rooms, reinforcing corporate identity.

Compliance and Documentation: Panels with the logo often meet State Grid technical and safety standards, which may include relay programming, wiring, and protection schemes.

Placement on PanelsThe logo is usually placed on the front door or faceplate of the panel for visibility. It may appear alongside manufacturer labels (e.g., Schneider Electric, Siemens, ABB) and panel identification numbers.

In some cases, the logo is included in schematic diagrams or documentation to indicate the panel's association with State Grid systems.

Design and Format

The logo is available in PNG, SVG, AI, EPS, and CDR formats, allowing it to be printed or engraved on panels without loss of quality. Panels are often custom-designed to accommodate the logo along with other operational indicators, such as relays, annunciators, and test blocks. Integration with Relay Protection Panels Modern relay protection panels include multifunction relays, control devices, and communication interfaces.

The logo does not affect functionality but provides a clear visual cue of the panel's ownership and compliance. It is common in factory-assembled panels where the logo is applied during production, ensuring uniformity across multiple installations. In summary, the State Grid logo on a power relay protection panel is primarily a visual identifier for ownership, standardization, and compliance, typically placed on the front of the panel and integrated into both physical and schematic representations of the system.

Article Content

Primary Protection Relays | ABB

ABB's Relion family of protection and control relays for primary distribution offers a wide range of products for protection, control, measurement and supervision of power distribution systems for IEC

SIPROTEC Protection Relays | Siemens

The SIPROTEC 7SX82 universal protection device covers most tasks in medium voltage and distribution grids. Tailor its functionality and pay only for what you apply.

Protective relays for mains protection | Phoenix Contact

The front panels of the protective relays offer numerous options for interaction and for visualizing the current states. The displays can be configured as needed and offer sufficient space to show system

SCHEMATIC REPRESENTATION OF POWER SYSTEM RELAYING

Prepared by Working Group I5 Working Group Assignment presentation of protection and control relaying. The report will identify methodology behind these practices, present issues

POWER SYSTEM PROTECTION & CONTROL PANELS GUIDE

Medelec designs protection and control panels to cater for various applications according to customer requirements, using latest technology relays which are supplied by Schneider Electric, Siemens and

Symbols for Electrical Construction Drawings

This publication describes graphic symbols used to represent electrical wiring and equipment on construction drawings. In this publication, the term “electrical” is used to include electrical, electronic,

Protection, Control & Metering

GE Vernova's Protection, Control, and Metering solutions deliver precise, high-performance automation for today's evolving grid. From advanced relays to

Power System Protection Icon royalty-free images
