

Telecommunications wall fiber optic cable steel strand

Overview

Once strands are placed, fibers can be attached up to the maximum load allowed by the system. There are numerous options for strength, size, and corrosion protection to best fit different local environments.

Key Takeaways

Steel messenger strands and lashing wires provide structural support and corrosion protection for fiber optic cables in aerial and wall-mounted installations.

Steel Messenger Strand

A steel messenger strand is a stranded steel cable that supports the weight of fiber optic cables, acting as the primary structural element in aerial or wall-mounted installations. Typically, it consists of six wires wrapped around a central wire, most commonly made of carbon steel with a zinc coating. The zinc coating provides cathodic protection, preventing rust even on cut ends.

For more aggressive environments, such as coastal areas, zinc-aluminum coatings offer higher corrosion resistance and can extend the lifespan of the strand to several decades. Messenger strands are specified by diameter and strength, with options for different coating classes (A, B, C), where higher classes indicate thicker protective coatings. They can support a variety of fiber cables, including loose tube and ribbon cables, and allow for future expansion by lashing additional cables on top of existing ones.

Lashing Wire

Lashing wire is typically stainless steel with diameters ranging from 0.038" to 0.045" and is annealed for high ductility with minimum strengths of 70–90 kpsi.

Stainless steel grades are selected based on the weight of the cables and environmental conditions, providing both strength and corrosion resistance. Lashing wire secures fiber cables to the messenger strand, creating a flexible infrastructure that accommodates slack storage, drop cables, and mid-span hardware.

Standards and Specifications

Steel messenger strands and lashing wires adhere to ASTM standards, such as ASTM 475 for metallic-coated steel wire strands and ASTM A228 (music wire) for optical cables. Manufacturers like Bekaert offer customized specifications for strand count, diameter, and minimum breaking strength to meet specific installation requirements. Options include single-strand or multi-strand configurations (3, 7, or 19 wires) and various strength grades, including extra high-strength and utility grades.

Installation Considerations

Messenger strands and lashing wires are installed to support the maximum load allowed by the system, ensuring proper sag and tension. They are compatible with aerial hardware such as brackets, straps, J-hooks, and clamps for pole or wall mounting. Proper selection of strand diameter, coating, and lashing wire grade is critical to ensure long-term durability and safety in different environmental conditions.

Summary

In telecommunications fiber optic installations, steel messenger strands provide the structural backbone, while stainless steel lashing wires secure the cables. Together, they create a durable, flexible, and expandable infrastructure that meets industry standards and withstands environmental challenges.

Aerial Fiber Deployment: Messenger Strand and Lashing Wire

Once strands are placed, fibers can be attached up to the maximum load allowed by the system. There are numerous options for strength, size, and corrosion protection to best fit different local environments.

Messenger Wire/Strand Manufacturer & Supplier

Our specifications include ASTM 475, which covers metallic-coated steel wire strands, and ASTM A228 (music wire) for optical cables. We also offer customized specifications upon request to meet specific

Wire for Broadband & Telecom | National Strand

Our stainless-steel strand greatly benefits the broadband and telecom industry. With its strength and resistance to corrosion and oxidation, our strand can support telecom towers easily in some of the

Messenger Wire

Messenger wire/strand is a steel wire to support fiber optic cables. It bonds communication wires to provide the structural support needed to keep them in place. The messenger wire prevents sagging

BABA 100% USA | Guardian Cable

For over 20 Years, Guardian Cable Systems LLC has been manufacturing and supplying exclusively 100% melted and manufactured in United States of America USA Galvanized and Galfan coated

Telecommunication brochure (smaller size)

Their steel cores add to the wires' strength, making strands with Bezin-al® coatings an ideal solution for special conditions. Inclement weather like high winds and ice can contribute to tension and ice loading.

AERIAL-LITE Unitube Figure-8 Fibre Optic Cable Product Details

Product Details tube cable, which is intended for use in aerial installations. This product has integrated extra high strength (EHS) stranded steel messenger wire as a support strand which provides high

Telecom Specialties Store

We are dedicated to meeting the diverse needs and regulatory requirements of every project we handle. Recognizing that each project has its unique specifications, we offer a wide range of material options

FIBER OPTIC CONSTRUCTION STANDARDS

Fiber optic cable sequential numbers are required at each pole location and vault wall. Sequential numbers will identify conduit length, and slack left in vaults and at poles.

Galvanized Steel Strands For Optical Fiber Cables

China supplier of galvanized steel strand for optical fiber cable. Stable size, high tensile strength galvanized steel strand for optical fiber cable with favorable price.

Optical Fibre Cables - Verified B2B Suppliers | Europages

Optical Fibre Cables Supplier Types and Capabilities Integrated Solution Providers serve as the backbone of optical fibre networks, much like a central nervous system for connectivity. Especially for

How does fiber optics work?

Imagine what they'd make of modern fiber-optic cables—"pipes" that can carry telephone calls and emails right around the world in a seventh of a

Fiber Optic Connector Types: A Beginners Guide

The fiber connector types, sometimes referred to as terminations, link fiber optic cables together through terminals, switches, adapters, and patch

Optical fiber connector

An optical fiber connector is a device used to link optical fibers, facilitating the efficient transmission of light signals. An optical fiber connector enables quicker connection and disconnection than splicing.

Fiber Optic Cable for Secure Surveillance Systems

In a security project, more cameras do not always mean more network cable. For Middle East villa compounds, industrial parks and smart city projects, the real question is distance. If camera ...

Aerial Fiber Deployment: Messenger Strand and Lashing Wire

A steel messenger is a stranded steel cable that acts as a support structure to which fiber optic cable is tied (lashed) by way of steel lashing wire. The steel messenger acts as a structure that supports the

Aerial Cable Placing Procedure

Abstract An aerial cable is an insulated cable usually containing all fibres required for a telecommunication line, which is suspended between utility poles or electricity pylons. Aerial optical

How It Works: Optical Fiber | Glass Optical Fiber | Corning

How it Works: Optical Fiber Corning's iconic innovation continues to harness light and shape the way we communicate today When we make a quick phone call,
