

Two-core indoor terminal box

Overview

FUNCTION: This 2-port fiber optic distribution box effectively terminates, protects and manages fiber optic cables.

Key Takeaways

A two-core indoor terminal box is a compact enclosure used for terminating, splicing, and managing two optical fibers or electrical connections indoors, providing protection and organized connectivity.

A two-core indoor terminal box serves as a termination point for fiber optic or electrical cables within homes, offices, or small commercial spaces. In fiber optic networks, it connects the feeder cable to drop cables, linking to devices like Optical Network Terminals (ONTs) in FTTH, FTTD, or FTTO systems. For electrical applications, it provides a secure platform for connecting two wires, ensuring stable and reliable power distribution.

Key Features

- **Compact and Lightweight:** Designed for wall, desktop, or surface mount installation, taking minimal space.
- **Material:** High-quality ABS or engineering plastic for mechanical protection, dust, and moisture resistance.
- **Ports and Capacity:** Supports 2 cores for splicing and termination, often with SC or LC duplex adapters for fiber networks.
- **Cable Management:** Internal routing guides maintain proper fiber bend radius and organize cables for easy access.

- **Protection:** Hinged covers, dust caps, and anti-theft locking mechanisms prevent damage and contamination .

- **Electrical Safety:** For electrical terminal boxes, options include screw or spring clamp mechanisms, insulated grounding, and withstand voltage up to 3000V .

Applications

- **Fiber Optic Networks:** Termination of indoor fiber cables, splicing, and connection to ONTs in residential buildings, apartments, villas, and offices .

- **Electrical Systems:** Secure connection and distribution of two wires in industrial, commercial, or residential circuits .

- **Indoor Use:** Suitable for wall mounting, desktop placement, or surface installation, providing organized and protected cable management .

Installation and Operation

- **Mounting:** Fixed to walls using screws; cable entry can be from front, bottom, or back for flexible deployment .

- **Splicing and Termination:** Fibers or wires are clamped, spliced, and routed inside the box, maintaining proper bend radius and preventing damage .

- **Maintenance:** Hinged covers allow easy access for inspection or replacement, while dust caps protect unused ports .

Advantages

- Consolidates splicing, termination, and distribution in one unit for fiber networks .

- Provides mechanical protection and environmental resistance.

- Ensures organized cable management and easy maintenance.

- Supports standard adapters and flexible installation options. In summary, a two-core indoor terminal box is an essential component for both fiber optic and electrical systems, offering secure, organized, and protected connections for indoor installations .
