

Wall-mounted network cabinet splicing structure

Overview

The fiber optic splice enclosure shall house, organize, manage and protect cable to cable fusion splice connections.

Key Takeaways

Wall-mounted network cabinets are designed to house, organize, and protect fiber optic splices with horizontal trays, cable management features, and accessible wall-mounted installation. Overview

Wall-mounted splice cabinets, also known as wall-mounted splice enclosures, are used to manage fiber optic splicing in both indoor and indoor/outdoor environments. They provide a compact, accessible solution for splicing fiber cables directly on the wall, making them ideal for Fiber-to-the-Premises (FTTP) deployments and data center transitions from high-count external cables to smaller internal cables .

Splicing Structure

1. Splice Trays:

- Cabinets feature horizontal splice trays to facilitate easy operation and maintenance .
 - Trays can accommodate individual fibers or ribbon fibers, with capacities ranging from 48 fibers per tray up to 144 fibers for ribbon configurations .
 - High-density enclosures can handle medium to large fiber counts, with some models supporting up to 3,456 or 6,912 fibers .
- #### 2. Cable Management:

- Incoming cables are secured using cable brackets, glands, and breakout sleeve kits to maintain proper routing and prevent fiber damage .
 - Cabinets provide slack storage for fiber excess, allowing for future re-splicing or maintenance .
 - Fray-resistant expandable sleeving and armored cable grounding kits are included for protection and durability .
3. Accessibility and Installation:
- Wall-mounted design allows splicing under installed conditions, eliminating the need to remove the cabinet for maintenance .
 - Cabinets are designed for easy access to trays and cables, with sufficient space for splicing machines and tools .
 - Cutout diameters for cable entry vary depending on cable size, ranging from 22.5mm to 64mm for high-count cables .

Applications

- FTTP networks where fiber needs to be spliced close to the end-user.
- Data centers for transitioning large external fiber cables to smaller internal distribution cables.
- Indoor/outdoor installations requiring compact, wall-mounted solutions with high fiber density management .

Key Features

- Horizontal splice trays for ease of operation.
- High fiber count capacity with modular tray design.
- Integrated cable management and grounding solutions.
- Wall-mounted accessibility for installation and maintenance.
- Compatibility with both individual and ribbon fiber splicing . Wall-mounted network cabinets provide a versatile and organized splicing structure, ensuring fiber protection, efficient cable management, and easy maintenance in both residential and enterprise network deployments.
